

Company: Phillips 66 (PSX)

Sector: Energy

Phillips 66 is an oil and gas company that purchases for resale and markets refined petroleum products. Its joint venture operates facilities in the United States and the Middle East and primarily produces olefins and polyolefins.

Knowledge Is the Key to Successful Investing

The core of the Better Investing system is this: Sales growth drives earnings growth, and earnings growth drives stock price.

Using the Stock Selection Guide (SSG), you'll forecast growth rates and determine the stock's potential high and low prices.

The SSG charts key data that helps you assess the quality and price of a particular stock.

Quality stocks will show sales (green line) and earnings (blue line) growing at a consistent, high rate. The vertical black bars record the corresponding stock price range for each year.

Achieve Long-Term Investing Success

The SSG helps identify high-quality, well-managed companies whose stocks are selling at reasonable prices. By investing in these companies for the long term, you increase your chances of investing success.

The SSG enables you to further rate a stock by studying the company's pre-tax profit on sales, and return on equity (above). Look for a stable or growing return.

The SSG will then show you whether the stock is reasonably priced (in the Buy zone) and whether it offers a suitable risk-reward ratio.

The SSG is part of an exclusive suite of wealth-building tools that help BetterInvesting members achieve long-term investing success.
